GROWBOOK™

Grow your own pine tree with Growbook and give back to the Earth what has been taken.

Planting instructions

- 1 Place the seeds in a container with warm water for 24 hours. Plant them in a shallow hole in a pot with damp soil mixed with sand (proportion 3:1).
- 2 Sprinkle the surface with a bit of sand and spritz with water.
- 3 Place the plant pot in a shady spot. When the seeds start to sprout (after 10-20 days), provide them access to daylight and moderate amount of water, avoid too much sun exposure.
- 4 After about 2 years of growing in the plant pot, place the seedlings into the ground, preferably in autumn (accordingly to your local planting regulations).

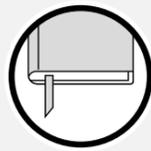

ECOcalculator

GROWBOOK™

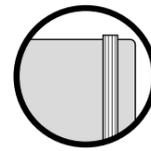

The Growbook features seeds of pine tree, which is the most commonly used for manufacturing of wood and paper goods in our climate zone.

Seeds in a wooden casing can be incorporated into both one-piece and combined designs. Growbook™ is available for foamboard cover only.
